

SSL Certificate

An SSL Certificate allows your site to be accessed securely (over https with the browser padlock) at your domain, rather than at hardsleepermusicgrou.fatcow.com. A certificate gives your site or store more authority so your customers will feel more secure about their purchases.

How it Works

1. Purchase the type of [SSL Certificate](#) you want to secure your site.
2. Select the domain your SSL Certificate will be used to protect. **You need to have a domain to submit your SSL request.**
3. Complete the SSL certificate submission form with the information needed to start the submission process.
4. A forward using the email address "hostmaster@domain.com" will be created, which will forward to your Administrative email address.
5. You'll receive an email asking you to confirm your choice of an SSL Certificate on your chosen domain.
6. If you are purchasing a True BusinessID with EV Certificate, submit a signed agreement from the Certificate Approver. (See requirements at <http://www.geotrust.com/ev>)
7. Upon successful completion, we'll install or renew your SSL Certificate.

Domain	Expiration Date	IP Address	Status	Type
www.hardsleepermusicgroup.com (Download Certificate)	February 7, 2012		Installed (Renew This Certificate)	RapidSSL
